PROJECTS

StudentHub – Student Management System | GitHub

Java · Spring Boot · Spring Security · Spring Data JPA · Hibernate · MySQL · Thymeleaf · Bootstrap 5

- Built a full-stack Student Management System using a layered Controller-Service-Repository-Entity architecture, with complete CRUD operations backed by Spring Data JPA and Hibernate for persistent MySQL storage.
- Secured the application with Spring Security form-based login (custom login page, logout, all pages require authentication); implemented student search by name, sorting, pagination, and a dashboard showing total students, passed/failed counts, average marks, and top student.
- Developed a responsive Thymeleaf front-end with Bootstrap 5 and form validation across all CRUD operations.
- Built REST API endpoints (GET, POST, PUT, DELETE) for student CRUD, plus endpoints for passed students, average marks, and top student, and tested them in Postman.
